

Online **ID VERIFICATION**, direct from your clients
smartphone.

 www.idplizz.com

 Info@idplizz.com

Verify the **true identity** of an individual logging into your website or intranet, then store the transaction data in **Blockchain** for complete transparency.

The user starts to log into your website

The IdPlizz API in your system sends a push notification to the users phone

User receives push notification

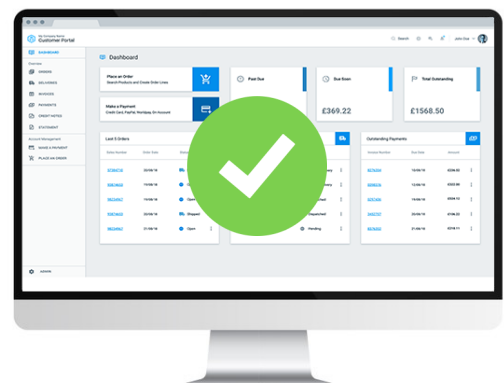

User provides the requested biometrics

The IdPlizz AI system triangulates all the biometrics supplied including comparing a selfie image against a physical photo ID document.

The chance of a false positive is 1 in 3,000,000,000

The IdPlizz API in your system receives a notification verifying the users ID with a simple Yes or NO

With IdPlizz merging physical real-World ID with your clients digital passport, we deliver you the assurance of knowing 100% the photo ID holder is the same person who logged into your website, where they were and on what device. No other solution offers the same level of assurance as IdPlizz.
